

Seconn RoHS Declaration

The Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment 2002/95/EC; commonly referred to as the Restriction of Hazardous Substances Directive or RoHS was adopted in February 2003 by the European Union. The RoHS directive took effect on 1 July 2006, and is required to be enforced and become law in each member state. This directive restricts the use of six hazardous materials in the manufacture of various types of electronic and electrical equipment.

RoHS is often referred to as the lead-free directive, but it restricts the use of the following six substances:

Lead (Pb)

Mercury (Hg)

Cadmium (Cd)

Hexavalent chromium (Cr6+)

Polybrominated biphenyls (PBB)

Polybrominated diphenyl ether (PBDE)

PBB and PBDE are flame retardants used in several plastics.

The Waste Electrical and Electronic Equipment Directive 2002/96/EC (WEEE Directive)

The main objectives of the WEEE Directive are the prevention of waste electrical and electronic equipment; promote the re-use recycling and other forms of recovery of used materials and components, and to improve the environmental performance of all operators (manufacturers, traders, treatment facilities) involved in the life cycle of products.

Seconn strongly supports efforts to create environmentally friendly and sustainable products.

Because of products lifetime and the high reliability requirements of Seconn products, we need to prepare ourselves well in advance to ensure a successful transition to “lead-free” and “RoHS Compliant” products.

All of Seconn’s connector products used to be complete RoHS compliant as well. All of connector products as supplied to clients by Seconn are complete comply with the European RoHS Directive 2002/95/EC.

Seconn sincere desire to be a "green partner" with you that protect our ecological environment together.
